5-29-12 Date

BUREAU OF PUBLIC WATER SUPPLY

CALENDAR YEAR 2011 CONSUMER CONFIDENCE REPORT CERTIFICATION FORM

/ Public Water Supply Name

0240226
List PWS ID #s for all Water Systems Covered by this CCR

The Federal Safe Drinking Water Act requires each *community* public water system to develop and distribute a consumer confidence report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed to the customers, published in a newspaper of local circulation, or provided to the customers upon request.

Please Answer the Following Questions Regarding the Consumer Confidence Report Customers were informed of availability of CCR by: (Attach copy of publication, water bill or other) Advertisement in local paper On water bills Other Date customers were informed: / / CCR was distributed by mail or other direct delivery. Specify other direct delivery methods: Date Mailed/Distributed: / / CCR was published in local newspaper. (Attach copy of published CCR or proof of publication) Name of Newspaper: Date Published: / / X CCR was posted in public places. (Attach list of locations) Date Posted: 5 12912012 OFFICE CCR was posted on a publicly accessible internet site at the address: www. **CERTIFICATION**

> Mail Completed Form to: Bureau of Public Water Supply/P.O. Box 1700/Jackson, MS 39215 Phone: 601-576-7518

Name/Title (President, Mayor, Owner, etc.)

I hereby certify that a consumer confidence report (CCR) has been distributed to the customers of this public water system in the form and manner identified above. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply.

2011 Drinking Water Quality Report^{2 JUN - 5} AM IO: 43 Tiny Tots Daycare PWS 0240226

Is my water safe?

We are pleased to present this year's Annual Water Quality Report (Consumer Confidence Report) as required by the Safe Drinking Water Act (SDWA). This report is designed to provide details about where your water comes from, what it contains, and how it compares to standards set by regulatory agencies. This report is a snapshot of last year's water quality. We are committed to providing you with information because informed customers are our best allies.

Do I need to take special precautions?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Water Drinking Hotline (800-426-4791).

Where does my water come from?

Our water supply comes from the Graham Ferry Formation Aquifer.

Source water assessment and its availability

The source water vulnerability assessment ranks our water supply as higher due to incomplete information.

Why are there contaminants in my drinking water?

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's (EPA) Safe Drinking Water Hotline (800-426-4791).

How can I get involved?

If you have any questions concerning your drinking water supply, please contact Mary Fortenberry at 228.255.3277.

Description of Water Treatment Process

Your water is treated by disinfection. Disinfection involves the addition of chlorine or other disinfectant to kill dangerous bacteria and microorganisms that may be in the water. Disinfection is considered to be one of the major public health advances of the 20th century.

Monitoring and reporting of compliance data violations

A MESSAGE FROM MSDH CONCERNING RADIOLOGICAL SAMPLING

In accordance with the Radionuclides Rule, all community public water suppliers were required to sample quarterly for radionuclides beginning January 2007 - December 2007. Your public water supply completed sampling by the scheduled deadline; however, during an audit of the Mississippi State Department of Health

Radiological Health Laboratory, the Environmental Protection Agency (EPA) suspended analyses and reporting of radiological compliance samples and results until further notice. Although this was not the result of inaction by the public water supply, MSDH was required to issue a violation. This is to notify you that as of this date, your water system has not completed the monitoring requirements. The Bureau of Public Water Supply has taken action to ensure that your water system be returned to compliance by March 31, 2013. If you have any questions, please contact Melissa Parker, Deputy Director, Bureau of Public Water Supply, at 601.576.7518.

Additional Information for Lead

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Tiny Tots Daycare is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

Water Quality Data Table

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of contaminants in water provided by public water systems. The table below lists all of the drinking water contaminants that we detected during the calendar year of this report. Although many more contaminants were tested, only those substances listed below were found in your water. All sources of drinking water contain some naturally occurring contaminants. At low levels, these substances are generally not harmful in our drinking water. Removing all contaminants would be extremely expensive, and in most cases, would not provide increased protection of public health. A few naturally occurring minerals may actually improve the taste of drinking water and have nutritional value at low levels. Unless otherwise noted, the data presented in this table is from testing done in the calendar year of the report. The EPA or the State requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not vary significantly from year to year, or the system is not considered vulnerable to this type of contamination. As such, some of our data, though representative, may be more than one year old. In this table you will find terms and abbreviations that might not be familiar to you. To help you better understand these terms, we have provided the definitions below the table.

	MCLG	MCL,							
	or	TT, or	Your	Ra	nge	Sample			
Contaminants	MRDLG	MRDL	Water	Low	<u>High</u>	<u>Date</u>	Violation	Typical Source	
Disinfectants & Disinfectant By-Products									
(There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants)									
Chlorine (as Cl2) (ppm)	4	4	0.53).53 NA		2011	No	Water additive used to control microbes	
Inorganic Contaminants									
Antimony (ppb)	6	6	0.5	NA		2011		Discharge from petroleum refineries; fire retardants; ceramics; electronics; solder; test addition.	

Arsenic (ppb)	0	10	0.5	NA		2011	1	No	Erosion of natural deposits; Runoff from orchards; Runoff from glass and electronics production wastes	
Barium (ppm)	2	2	0.0533	NA		2011			vischarge of drilling wastes; Discharge from netal refineries; Erosion of natural deposits	
Beryllium (ppb)	4	4	0.5	NA	NA 2011 No coal-burning factories; Disch		Discharge from metal refineries and coal-burning factories; Discharge from electrical, aerospace, and defense industries			
Cadmium (ppb)	5	5	0.5	NA		2011	natural deposits; Discharge from metal		refineries; runoff from waste batteries and	
Chromium (ppb)	100	100	0.5	NA		2011	Discharge from steel and pulp mills; E of natural deposits		Discharge from steel and pulp mills; Erosion of natural deposits	
Fluoride (ppm)	4	4	0,279	NA		2011	1	No	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories	
Mercury [Inorganic] (ppb)	2	2	0.5	NA		2011	1	Erosion of natural deposits; Dischar No refineries and factories; Runoff from Runoff from cropland		
Selenium (ppb)	50	50	2.5	NA		2011	1	Discharge from petroleum and metal refineries; Erosion of natural deposits; Discharge from mines		
Thallium (ppb)	0.5	2	0.5	NA		2011	ו	No	Discharge from electronics, glass, and Leaching from ore-processing sites; drug factories	
Cyanide [as Free Cn] (ppb)	200	200	15	NA		2011	No Discharge from plastic and fertilizer fa Discharge from steel/metal factories		Discharge from plastic and fertilizer factories; Discharge from steel/metal factories	
Nitrate [measured as Nitrogen] (ppm)	10	10	0.08	NA		2011]	Runoff from fertilizer use; Leaching fi No septic tanks, sewage; Erosion of natura deposits		
Nitrite [measured as Nitrogen] (ppm)	1	1	0.03	NA		2011 No		No	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits	
Contaminants	MCLG	AL	Your Water	Sam Dat	- (# Sample	- 1	Exceed AL	Typical Source	
Inorganic Contamina		****	TTHEFT	2000	<u> </u>			2201	THE PERSON NAMED IN COLUMN TO SERVICE AND ADDRESS OF THE PERSON NAMED IN COLUMN TO SE	
Lead - action level at consumer taps (ppb)	0	15	1	200	9	0		No	Corrosion of household plumbing systems; Erosion of natural deposits	
Copper - action level at consumer taps (ppm)	1.3	1.3	0.5	200)9	0	No		Corrosion of household plumbing systems; Erosion of natural deposits	

Undetected Contaminants

The following contaminants were monitored for, but not detected, in your water.

	MCLG or	MCL or	Your		
Contaminants	MRDLG	MRDL	Water	<u>Violation</u>	Typical Source
Haloacetic Acids (HAA5) (ppb)	NA	60	ND	No	By-product of drinking water chlorination
TTHMs [Total Trihalomethanes] (ppb)	NA	80	ND	No	By-product of drinking water disinfection

Term	Definition
ppm	ppm: parts per million, or milligrams per liter (mg/L)
ppb	ppb: parts per billion, or micrograms per liter (μg/L)
NA	NA: not applicable
ND	ND: Not detected
NR	NR: Monitoring not required, but recommended.

Term	MCLG: Maximum Contaminant Level Goal: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.					
MCLG						
MCL	MCL: Maximum Contaminant Level: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.					
TT	TT: Treatment Technique: A required process intended to reduce the level of a contaminant in drinking water.					
AL	AL: Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.					
Variances and Exemptions	Variances and Exemptions: State or EPA permission not to meet an MCL or a treatment technique under certain conditions.					
MRDLG	MRDLG: Maximum residual disinfection level goal. The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.					
MRDL	MRDL: Maximum residual disinfectant level. The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.					
MNR	MNR: Monitored Not Regulated					
MPL	MPL: State Assigned Maximum Permissible Level
